Summary

Full Stack Engineer with 2.5+ years of experience building scalable enterprise applications using .NET Core, C#, SQL Server and React. Skilled in REST API architecture, OAuth-based security, SSL troubleshooting, high-volume transaction processing, and backend performance optimization for distributed enterprise systems supporting 10,000+ users.

Skills

Backend: .NET Core, .NET Framework, C#, ASP.NET MVC, Web APIs, Entity Framework, LINQ, NUnit, Moq

Frontend: React, JavaScript, Bootstrap, jQuery, Kendo UI

Database: Microsoft SQL Server, Stored Procedures, Query Optimization, SSMS

Tools: Postman, Git

Cloud & DevOps: Azure, Docker, CI/CD Pipelines, IIS

Architecture and Security: OAuth 2.0, RBAC, Distributed Systems, Clean Architecture, SOLID Principles, LLD

Experience

Software Engineer 2 — Microchip Technology

Oct 2023 – Present

Bengaluru, India

- Designed backend services for ERP and invoicing platforms using ASP.NET MVC (.NET), SQL Server, and React supporting 10000+ enterprise users.
- Architected REST APIs consumed by React frontend modules enabling reliable data exchange across distributed application services.
- Integrated OAuth 2.0 authentication and Role-Based Access Control (RBAC) securing customer-facing APIs and internal enterprise modules.
- Diagnosed and resolved HTTPS-TLS handshake failures improving API reliability and secure communication in production environments.
- Improved SQL queries and indexing strategies, improving API response performance by 25–30%.
- Established modular service architecture following Clean Architecture and SOLID principles improving maintainability and scalability.

Software Engineer Intern — Microchip Technology

Oct 2022 – Oct 2023

Bengaluru, India

- Enhanced ERP backend modules using C#, ASP.NET MVC, SQL Server, and Entity Framework supporting internal business workflows.
- Built transactional CRUD APIs enabling reliable interaction between frontend modules and backend services
- Reduced regression defects by 25% by introducing streamlined unit tests.

Projects

Customer Order Management & ERP Platform

Technologies: .NET Core, SQL Server, Entity Framework, REST APIs, React

- Created a full-stack Order Management Platform enabling order creation, tracking, and ERP-integrated production workflows.
- Implemented product configuration modules supporting tool customization, discount coupons, and order quotations.
- Automated asynchronous order processing pipelines in production, reducing processing latency by 35%.
- Developed batch processing and mass upload systems enabling ingestion of 10K+ records per batch in production, ensuring data integrity and scalable order processing.

Invoice Management System

Technologies: .NET Core, SQL Server, REST APIs, React

- Constructed backend services aggregating ERP order and pricing data to automate invoice generation workflows.
- Implemented validation and reconciliation logic for processing 5K+ invoices daily and reducing discrepancies by 25%.
- Optimized invoice data processing workflows reducing manual intervention and improving billing efficiency.

Certifications

- Low-Level System Design, SOLID Principles & Design Patterns — Udemy
- Advanced Algorithms and Complexity — Coursera

Education

Master of Technology (M.Tech), Computer Science

Bangalore Institute of Technology

Aug 2021 – Jul 2023

Secured 2nd Rank
